

Computer Vision Engineer Job Description

We are looking for a skilled and analytical Computer Vision Engineer who will be responsible for developing and deploying computer vision algorithms and systems that process and analyze visual data. You will work closely with data scientists, engineers, and stakeholders to build intelligent solutions using images and video data.

A bachelor's degree in computer science, artificial intelligence, data science, or a related field is required. Candidates should have 2 to 5 years of experience in computer vision, machine learning, or related roles.

Computer Vision Engineer Responsibilities:

- Designing and implementing computer vision algorithms and models.
- Processing and analyzing image and video datasets.
- Developing deep learning models for tasks such as object detection, classification, and segmentation.
- Collaborating with teams to integrate vision systems into applications.
- Optimizing model performance and accuracy.
- Deploying models into production environments.
- Working with large-scale datasets and improving data quality.
- Debugging and improving existing vision systems.
- Documenting models, experiments, and results.
- Staying updated with advancements in computer vision and AI.

Computer Vision Engineer Requirements:

- A bachelor's degree in computer science, artificial intelligence, data science, or a related field.
- 2 to 5 years of experience in computer vision or machine learning.
- Strong proficiency in Python.
- Experience with libraries such as OpenCV, TensorFlow, or PyTorch.
- Understanding of image processing, deep learning, and neural networks.
- Knowledge of machine learning algorithms and techniques.
- Experience with model deployment and performance optimization.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Ability to work with large-scale visual data.
